

SUNY Delhi Heating Space Temperature Set Point Policy

SUNY Delhi is committed to providing a comfortable environment while promoting energy conservation and sustainability. To achieve these goals, the campus has developed a heating space temperature set point policy.

SUNY Delhi's heating season begins in early October and ends in early May. During this period, the campus has implemented a policy that will set target space temperatures in campus buildings as follows:

During occupied periods, (Monday – Friday 8 AM to 6 PM), space temperatures will be targeted for 68 degrees, and during unoccupied periods space temperatures will be targeted for 55 degrees.

These space temperatures will be maintained as close as possible, however, with different building system designs and controls, there may be periods when temperatures vary a few degrees above or below the targeted set points.

If space temperatures drop below 65 degrees during occupied periods, or drop below 52 degrees during unoccupied periods, please notify the Facilities department @ 4020, during the hours of 8 AM and 4 PM. The Facilities secretary will create and work order and notify the HVAC shop. On weekends or after hours, please contact the Heating Plant @ 4037.
